## Abstract

Method for controlling an air-conditioning system for a motor vehicle  $% \left( 1\right) =\left( 1\right) \left( 1\right) +\left( 1\right) \left( 1\right) \left( 1\right) +\left( 1\right) \left( 1\right) \left($ 

In order to improve and bring about predefined climatic conditions in the interior of a vehicle more quickly, it is proposed to use an air mass flow rate sensor to measure the air mass flow rate fed to the air-conditioning system. As a result the passenger compartment can be air-conditioned quickly and effectively.
